Hannibal School District

Hannibal School District in Missouri teamed up with Nick Willer at Doors N More when it needed to replace a few locks in classrooms. They were looking for a more than just a traditional lockset. That's when they discovered the GT135 LED by PDQ.

School safety is at the front of everyone's mind. How can we better secure our classrooms to protect our children and teachers. The GT135 LED Classroom Intruder Lockset is built with PDQ's Grade 1 XGT/GT cylindrical lock. The lock has a red LED indicator that confirms if the lever is locked from the inside of the classroom. There is no need to go outside of the classroom to verify the door is locked. In addition to the LED light, arrows show the direction to turn the key for rapid lockdown, especially in a panic situation.

Doors N More has been a PDQ customer for over 20 years. "PDQ has pretty much everything we need and, on top of that, provides quality hardware that beats out the global lock we were using before stepping up to PDQ," says Willer.

Product(s) Used:

- GT135 LED
