## Racine Lutheran High School

Racine Lutheran High School was bursting at the seams. Not only was the facility old and dated, but they were turning away new students because it was over-crowded. The building's enhancements will result in updated academic spaces with the technology and tools students need to compete in today's global marketplace. The improvements include additional new classrooms, an academic support center, a new spacious gymnasium with expanded locker rooms, and a new fitness/weight center. The plan features more than 50,000 square feet of added and renovated space.

The expansion was outfitted with a full cadre of PDQ door hardware. MR Series mortise locks were used for classroom and common area doors. 6300 Series exit device and trim were installed on exterior and fire rated interior doors. 7100 Series institutional grade door closers were utilized throughout the expansion.

**Product(s) Used:**

- MR Mortise Locks
- 6300 Exit Devices
- 6300 Exit Device Trim
- 7100 Closers
